Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. Claims 1-3, and 7-13 are in the application. Claims 4-6 have been canceled.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3 and 7-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mayau et al (WO 02 /44607) in view of Lively (6,397,895) and Oma et al (6,976,443).

Mayau et al disclose a method of supplying a oil from a first floating structure to an offloading structure including the steps of providing a flexible duct 1 extending between the two structures at a water depth; the system includes at least one pump. Lively discloses a similar arrangement and teaches providing the pipe with insulating material around the duct and a friction reduction layer 3. In view of these disclosures, it would have been obvious to one having ordinary skill in the art to provide the duct in the system of Mayau et al with an insulating layer and a friction reduction layer, generally as taught by Lively. The particular dimensions of the duct, the insulation layer and the friction reduction layer are deemed to have been obvious matters of design choice to one having ordinary skill in the art. Oma discloses an arrangement for supplying oil from a first structure to a second structure. Oma teaches arranging the hose in a curved trajectory above the sea bed and teaches providing end sections of the hose above the water

level. In view of these disclosures, it would have been obvious to one having ordinary skill in the art to provide the hose of Mayau with a curved configuration generally as taught by Oma. Such an arrangement would have been desirable dependant on the location of the connecting structures and to provide flotation units generally as taught by Oma. Claims 7-12 do not recite any method steps.

Conclusion

4. Pollack (6,394,154) , Karl (4,315,408) and Shivers (6,932,121) disclose fluid transfer systems between two floating units.

Response to Arguments

5. Applicant's arguments with respect to claims 1-3 and 7-13 have been considered but are moot in view of the new ground(s) of rejection.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to JESUS D. SOTELO whose telephone number is 571-272-6686. The examiner can normally be reached on Mon. - Fri. 7:00 AM -3:30 PM.
